Implementation of a efficient logistic for woodchips prodcution and the energetic valorisation

LogistiCIPlus

Logistic efficiency for wood energy production, through environemental soundness and high quality woody biomass

The project deals with the increased efficiency of energy production from woody biomass, through the improvement of the logistic of the supply chain. The project involve the adoption of a traceability tool and sustainability calculator. The objective is to lie down the basis for an improvement in the managment of the forest sites to reduce the CO2 of the woody biomass supply chain from the beginning. The output of the project is the implementation of the best practices that will emerge during the project and will grant to the forest enterprises the a tool to monitor the biomass fluxes from site

1

to site paired with theability to certificate the quality of the biomass

MORE DETAILS		
CHALLENGE ADDRESSED	DOMAIN	TYPE OF SOLUTION
	Harvesting, infrastructure, logistics	Collaboration platforms, logistical hubs
	Wood energy industry	
	Financing, funding schemes	
KEYWORDS	DIGITAL SOLUTION	INNOVATION
Efficiency	No	Yes
COUNTRY OF ORIGIN	SCALE OF APPLICATION	START AND END YEAR
	Regional/sub-national	2018 - 2021
