Forest stand inventory with the aid of the Smartphones capabilities (App). Easy, cheap and reliable tool for determining the most important dendrometer indicators (key figures of tree stands). Suitable for single tree measurement or stand inventories. Easy and fast implementation of forest inventories and single tree measurement.

Possible determination of the base area ( $\text{m}^2/\text{ha}$ ) with or without the distinction of different tree species. Trunk rate ( $\#/\text{ha}$ ), stand height ( $\text{m}/\text{ha}$ ), reserve of rough wood ( $\text{m}^3/\text{ha}$ ). Smartphones can be used as a good referencing tool for forest inventories and forest operation planning. Many further application developments and integrations thinkable.
