

# SAFERS | Structured Approaches for Forest Fire Emergencies in Resilient Societies

*SAFERS mission is to support societies becoming more resilient across the key phases of the forests fires emergency management cycle*

The project is going to create an open and integrated platform featuring a forest fire Decision Support System. The platform will use information from different sources: earth observations from Copernicus and GEOSS, fire sensors in forests, topographic data, weather forecasts and even crowdsourced data from social media and other apps that can be used by citizens and first responders to provide situational in-field information.
