

# PROZEL | Forecasting threats to forest ecosystems using an innovative system for the recognition of odours

*Innovative R&D project developing odor-based system (electronic nose) based on sensors with high sensitivity and AI to monitor selected, particularly dangerous forest pests.*

The threat of forests by various harmful microorganisms is growing due to changing climate conditions and spreading of non-native pathogens and pests.. Simultaneously the relevance of biological methods of monitoring and preventing forest degradation is increasing in the face of the chemical's use restrictions. The main aim of the project is the development of an innovative device (electronic nose/ e-NOS), based on a matrix of broad-band electrochemical sensors and neural networks that would detect and analyse the odor-based signals e.g. pheromones of certain insect species. The examples of pathogens and pests addressed in the project include Dendrolimus Pini (L.) and Phytophthora oomycetes.

The developed system delivers comprehensive and complex information which allows to create a neural classifier (using artificial intelligence). The dedicated software was developed to perform the analysis of the data and create a database – library of signals, which will allow to detect the analytes sought in the field. For each application foreseen in the project (analysis of specific smells), dedicated sensory matrices were prepared.

## DETTAGLI

---

ORIGINE DEL LEGNO	POTENZIALE DI MOBILITAZIONE
foresta	--
TIPO DI LEGNO	POTENZIALE SOSTENIBILITÀ - VALORE
--	--
TIPO DI LEGNO IN QUESTIONE	FACILITÀ DI IMPLEMENTAZIONE
--	--
IMPATTO SULL'AMBIENTE E LA BIODIVERSITÀ	FACILITÀ DI IMPLEMENTAZIONE - VALUTAZIONE
--	--
EFFETTO SUL REDDITO	PREREQUISITI CHIAVE
--	--
POTENZIALE DI SFRUTTAMENTO	TIPO DI EVENTO IN CUI QUESTO BPI È STATO PRESENTATO
--	--
HUB	EFFETTO SUL LAVORO
Polo Centro-Est	--
IMPATTO ECONOMICO	I COSTI DI ATTUAZIONE (EURO - €)
--	--
CONOSCENZE SPECIFICHE NECESSARIE
