

# Handbook Praticsols

**ROSEWOOD**  
**4.0** Sustainable Wood  
for Europe

It is a handbook on the practicability of forest plots. The machines work all year round in the forest and sometimes in unfavourable weather conditions. With an average cutting period of 6 to 10 years, soils have little time to recover in the event of major impacts. Soil compaction and rutting can cause productivity losses on the nearest trees. The handbook aims to give recommendations at each stage of the forest site and for each actor in the mobilisation of wood.

The guide aims to improve the quality of forest sites and consequently to make wood cutting more acceptable to the general public.

The handbook contains 23 recommendations throughout the wood mobilisation chain: during forest management, before the forest site, during the site, after the site and in the company. For example, it indicates to the owners the good practices to adopt to avoid a too important impact of the ground during the building site, like knowing the feasibility of the grounds, the elements of the ground, and the sensitive zones.

## DETALJER

---

**OPPRINNELSE FOR TRE**

Skog

**TYPE TRE**

Tre fra rundtvirke

**MOBILISERINGSPOTENSIAL**

NA

**BæREKRAFTPOTENSIAL - VERDI**

--

**TYPE TRE INVOLVERT**

Stemwood or woody biomass

**ENKEL IMPLEMENTERING**

Easy

**PåVIRKNING På MILJØ OG BIOLOGISK MANGFOLD**

Limites the impact of machines on the ground

**ENKEL IMPLEMENTERING - EVALUERING**

--

**INNTEKTSEFFEKT**

NA

**VIKTIGE FORUTSETNINGER**

to be adapted according to the climate, terrain and machines of each country

**UTNYTTELSESPOTENSIAL**
