

Productivity models for harvesting processes (HeProMo)

ROSEWOOD
4.0 Sustainable Wood
for Europe

HeProMo

HeProMo is an IT-based tool to predict the costs of timber harvesting scenarios under different aspects such as harvester logging. It allows certain settings to reflect the real situations in the forest. It provides preliminary costing and sensitivity analysis.

HeProMo is an IT-based tool to predict the costs of timber harvesting scenarios under different aspects such as harvester logging. It allows certain settings to reflect the real situations in the forest. It provides preliminary costing and sensitivity analysis. estimation of productivity and cost for wood harvesting operations (preliminary costing). Writing and controlling offers for wood harvesting operations. Estimation of variables and their importance (sensitivity analysis). Well suitable for application in teaching , eductaion and research to identify key contributing factors and assessmen of their influence on the results. The productivity model (HeProMO) predicts quickly and with a good accuracy the costs for concrete timber harvestin scenarios. It allows the identification of optimization possibilities. The application is quite easy to handle and gives a solid basis for good economic choices.

MAI MULTE DETALII

PROVOCARE ABORDATĂ	DOMAIN	TIP DE SOLUȚIE
5. Îmbunătățirea performanțelor economice și de mediu ale lanțurilor de aprovizionare cu păduri	Managementul pădurilor, silvicultura, servicii ecosistemice, reziliență Recoltare, infrastructură, logistică	Modelare, DSS, simulare, optimizare
CUVINTE CHEIE	SOLUȚIE DIGITALĂ	INOVAȚIE
Cost estimation; harvesting scenarios; sensitivity analysis	Da	Da
