

Description of best practice

Best practice	
Title	Castilla y León forest resources mobilization programme
Picture	
Domain	Mobilization, products, forestry, crisis.
Source of wood	Castilla y León, mobilization, forest, measures, wood
Location	Castilla y León
Implementers	Junta de Castilla y León
Actual status	running
Approach	<p>The forestry activity in Castilla y León is one of the most important in the forest Spanish context in terms of size and balance between the different agents and aspects of the value chain, in terms of productive area, production and productive potential, and variety and type of products. The globalization and duration of the economic crisis, affected the decrease of resources, this raised business difficulties and changes in the current management model. The programme was proposed as an instrument to stimulate economic activity and the development of the forest management.</p>
Main results	<p>The first objective is to increase the value of sustainable production, the productivity of the forests and the sector in the region. This would improve the main economic and employment parameters linked to the regional forestry sector.</p> <p>The programme development has allowed increasing the market of wood in Castilla y León.</p>
Lessons learned	In progress

Best practice assessment

Region	Castilla y León
Time scale	2014-2022
Mobilization Potential	3,1Million m ³
Kind of wood concerned	Stemwood. Above and below ground woody biomass (ex. shrubs, wood for fibres, wood for energy)
Sustainability Potential	Very positive
Impact on environment & biodiversity	Very positive
Ease of implementation	Medium
Economic impact	High
Job effect	High
Income effect	High
Specific knowledge needed	-
Costs of implementation	-
Technical readiness level	Applicable
Key information for adoption	-
