

Collection and use of urban wood waste

TEGA operates in urban public services area and initiated large campaign for wood residue collection in cities/villages in Covasna County. TEGA uses wood chips as fuel in its heating plant and provide heating for its workshops, offices. The capacity of the heat boiler is 200 kWt.

The idea was to collect wood residues from green areas. Collected wood residues are chopped and crushed and can be delivered for energy production. Types of collected waste wood: i.e. forest sanitation, gardening cuttings and cleaning operations. The types of biomass used are wood residues (barks, chips, branches).

Energy problems are so acute, that it is no longer possible to satisfy the local's constantly growing needs. This growth of energy demand must be increasingly satisfied by diversified energy sources, including sustainable and renewable resources. Biomass is a renewable energy option that can be practical and safe, can strengthen the circular economy, and can help ease the urgent strain on our planet's ecosystem.

TEGA company promotes and invests in acceleration of the entire biomass chain. The company members participate in collection, chipping activities and produce more than 500 m³ woodchips. They use this biomass material and valorize at the company. Moreover, training sessions on bioenergy issues, active involvement in local projects such as at waste collection actions TEGA company was actively involved.

PODROBNOSTI

IZVOR LESA

Vzdrževanje površin

TIP LESA

Recikliran in odpadni les

VRSTA OBRAVNAVANEGA LESA

Wood residuals, branches, barks, chips, old wreaths, christmas trees, etc

VPLIV NA OKOLJE IN BIODIVERZITETO

TEGA S.A. focused on the economic sustainability of the initiatives based on the circular economic model.

VPLIV NA PRIHODKE

The activity of the company is more sustainable by reducing the energy expenses

POTENCIAL IZKORIŠČANJA

--

VOZLIŠČE
