

RED FAITH as a tool of digital forestry and development of forests

RED FAITH

RED FAITH - Restoring Ecological Diversity of Forests with Airborne Imaging Technologies. Digital forestry: precision technology and knowledge for the development of forest aiming reduction of invasive species and analyzation of the surface. Due to the project the data collection was created with drones and based on the remote sensing datas the forest could be developed thus the forestry could be a service of the sustainability.

The project set the overall objective of contributing to preservation and protection of biodiversity in forest areas by supporting foresteries and other organizations responsible for managing habitats in detailed, up-to-date monitoring with airborne imaging. As specific objectives it accelerates reactions to emerging hazards, protects/restores natural assets by enabling foresteries to select most efficient interventions, improves knowledge of forest engineers, raise awareness on forest values and sets up cross border cooperation of foresteries.

MER INFORMATION

UTMANING SOM ADRESSERAS

1. Förbättra skogens motståndskraft och anpassning till klimatförändringar

NYCKELORD

Restoring Diversity Airborne Imaging

UPPHOVSLAND

Kroatien

DOMÄN

Skogsförvaltning, skogskjötsel, ekosystemtjänster

TYPE AV LÖSNING

Data plattformar, data hubbs, open data

DIGITAL LÖSNING

Ja

INNOVATION

Nej

POTENTIAL

Gränsöverskridande/transnationell

START OCH SLUTÅR

2017 - 2019
